Turning Radius	20"	10"	55"	38.5
# of Elements	32	16	28	14
UPS Shippable	Yes			

Which Antenna Works Best for Your Location?

Selecting the right antenna can be an easy task when you have the right information. One valuable tool is the Consumer Electronics Association's (CEA) antenna selector web site: www.antennaweb.org. By typing your address, you can find out which TV channels are available in your area, including the direction of the transmit towers and the type of antenna needed to receive these stations. On each antenna box, you will see the CEA antenna selector chart classifying the antenna. For example, if the web site says you need a medium directional antenna, choose the antenna that is classified as a medium directional or better.
