

SATELLITE SPLITTERS
ONE PORT POWER PASSING
P-2150-2-GX & P-2150-4-GX

The P-2150-GX series of high frequency splitters feature a 5-2300MHz frequency range. Diode steered power passing ensure that DC power is passed to the LNB from any of the output ports. High quality tongue and groove case for excellent RF1 shielding and weather resistance. Ports are spaced at 1" for use of security tool or weather boot. Low insertion loss and high return loss make this splitter ideal for even the most demanding commercial application.
