

Our Design and Rack & Balance Team Provides the End-to-End Solution

Design and Engineering:

Multicom is renowned for its expertise in the design of an array of distribution systems including:

- Analog/Digital (HDTV) • COAX/Fiber Optic (FTTx) • L-Band/CATV

All Designs Include:

- Distribution layout
- Headend block diagram
- Rack layout
- Complete priced bill of materials

Multicom designs distribution systems utilizing AutoCAD and Lode Data software; the industry standard for analysis, drafting and design.

Experience

Since 1982 we have worked with engineers and integrators from across the country to design thousands of systems.

Cost Effective

Because everything we need is 'In-House': We are able to choose the most cost effective solution to meet the requirements of your application.

No Guesswork

No more guessing when estimating project costs: We document the specifics of the design - where all cable and components are located - allowing you to make 'apples to apples' comparisons between vendor quotations.

Multicom, Inc.

1076 Florida Central Parkway, Longwood, FL 32750

Precise Customization:

Multicom's expertise is not only in the design of distribution systems, but also in designing with the most efficient components for your required specifications.

Rack and Balancing:

- All equipment identified front and rear
- Connecting cables labeled
- Headend balanced to industry standards or custom requirements
- Logical, efficient rack layout
- Burn-in eliminates initial failure and downtime - ensuring long term reliable operation
- All equipment is fully tested before shipment

Crating and Shipping:

- Racks are plastic wrapped, palletized, framed, and covered in a protective shell
- Critical components are fully supported
- Finished crate is equipped with shock and tilt indicators

Your End-to-End Solution

Our 'In-House' team of professionals have decades of experience in the assembly and construction of your customized system from concept through shipping. Multicom prides itself in providing comprehensive support and guidance from the installation phase, throughout ongoing operations, and later network expansions.
