

Our Design and Rack & Balance Teams Provide the End-to-End Solution

Design and Engineering:

Multicom is proud of its expertise in the design of an array of distribution systems including:

- Analog/Digital (HDTV)
- COAX/Fiber Optic (FTTx)
- L-Band/CATV

All Designs Include:

- » Distribution layout
- » Headend block diagram
- » Rack layout
- » **Complete priced bill of materials**

Multicom designs headend and distribution systems utilizing both traditional drafting and AutoCAD techniques.

Experience

We have been designing systems since the 'early days': **We're good at it!**

Cost Effective

Because everything we need is 'In-House': We are able to choose the most cost effective solution to meet the requirements of your application.

No Guesswork

No more guessing when estimating project costs: We document the specifics of the design - where all cable and components are located - **allowing you to make 'apples to apples' comparisons between vendor quotations.**

Precise Customization:

Multicom's expertise is not only in the design of distribution systems, but also in compiling the most efficient components for your required specifications.

Rack and Balancing:

- » All equipment identified front and rear
- » Connecting cables labeled
- » Headend balanced to industry standards or custom requirements
- » Logical, efficient rack layout
- » Burn-in eliminates initial failure and downtime

Crating and Shipping:

- » Racks are plastic wrapped, palletized, framed, and covered in a protective shell
- » Critical components are fully supported
- » Finished crate is equipped with tilt indicators

Your End-to-End Solution

Our 'In-House' team of professionals have decades of experience in the assembly and construction of your customized system from concept through shipping.
