

Lashing Wire

The difference between DCD **Lashing Wire** and other lashing wires isn't visible to the eye. While all lashing wires may look and feel alike only one, DCD lashing wire, is specially annealed for extra durability where the lash meets the strand.

Wound in continuous coils for easy payout, DCD lashing wires won't come back to haunt you. Instead, the lash holds tight and stays even. DCD gives you 14 choices of size and types: Aluminum, galvanized, various grades of stainless and non-metallic. All come in popular sizes to match any job. And, while our sizes and types vary, our quality doesn't.

Lashing Wire Specifications
