

Visors

Traffic signal visors are designed to limit glare from reflected sunlight in order to provide better visibility for vehicles as they approach the intersection.

About Visors

Traffic and pedestrian signals represent the foundation of safety at any signalized intersection. They also represent the first, and arguably the most important, interaction motorists, bicyclists and pedestrians have with Intelligent Transportation Systems (ITS).

Traffic signal visors are designed to limit glare from reflected sunlight in order to provide better visibility for vehicles as they approach the intersection. In addition, the visor must provide an unobstructed view in any lane within the approach. Econolite offers a complete line of traffic signal visors including cap, full circle, and tunnel visors. In addition, 45 degree visors are available to provide directional visibility on angled intersections.

At A Glance

- Visor options:
 - Tunnel
 - Full Circle
 - Cap
- Contact Econolite for availability for all non-ITE standard visors
