Unrivaled speed and mathematical precision in all your measurements...
Now clearer than ever before

Spectrum analyzer extended to 3.3 GHz

Televés set an unprecedented benchmark with the launch of the first portable field spectrum analyzer equipped with Digital Processing technology.

This milestone set a before and after in the certification of HDTV services in commercial and residential installations, for the first time the technicians had at their disposal the mathematical precision of sophisticated laboratory equipment in a portable format weighing less than 5 lbs.

Four years later, Digital Processing keeps offering unparalleled functionality and Televés launches its newest masterpiece with substantial enhancements and state-of-the-art new features, now presented in a larger and much brighter screen.

Getting the full potential of Digital Processing technology... clearly.

Remote access and measurements

Control your H60 remotely and make measurements from any internet connected device. Ideal for extended signal tests over time in headends and broadband distribution networks. Leave your H60 connected to your headend, node or anywhere in your HFC distribution network and control the unit and measure signals and quality parameters remotely. Once finished, export the results to your computer using the included HSuite software.
